

# ► SKB SERIES INDIRECT DRIVE SAFETY COUPLING

## Major Features

- Pulley safety coupling with radial clamping hub.
- Integrated bearing for high axial and radial loading to support pulleys, gears or sprockets.
- Upon disengagement, coupling will re-engage automatically at only one point per revolution and retain the drive's reference point.
- Adjustable disengagement torque.

## Material

- Steel hubs; steel safety element

Coupling must be selected so nominal torque is higher than highest operational torque of the application (i.e., during acceleration).  
Bore diameters smaller than the minimum are possible but reliable transmission of nominal torque cannot be guaranteed.
