Cleanroom Type

Dust-proof Type

Significantly
improved maintainability
and acceleration
Cleanroom specification with a
maximum stroke of 2500 mm

1. Increased maximum acceleration of 1G (9800 mm/sec²)

As with the ISA Series, you can now set a maximum acceleration/deceleration of up to 1 G.

2. New dust-proof type and cleanroom type

The new dust-proof type and cleanroom type both adopt a protective barrier made of stainless steel strips.

3. Cleanroom type with a long maximum stroke of 2500 mm

The improvement of the mid-support mechanism and stainless steel strip results in a long maximum stroke of 2500mm.

4. All models now adopt coupling specification

The motor/ball screw assembly was changed to an easy maintenance coupling connection; all without changing the overall length. This allows easy replacement in the event of motor failure.

Options

Name	Code	Page	Remarks
AQ seal	AQ	·P18	
Brake	B	·P18	
Reversed home specification	NM	·P18	
Guide with ball-retaining mechanism	RT	·P18	
Suction duct joint on opposite side	VR	·P18	

Common Specifications

Drive system (Note 4)	Ball screw ø20mm, rolled C10 [equivalent to rolled C5]
Backlash (Note 5)	0.05mm or less [0.02mm or less]
Guide	Integrated with base
Grease	Low dust raising grease (for both ball screw and guide)
Allowable load moment	Ma: 104.9N·m, Mb: 149.9N·m, Mc: 248.9N·m
Overhang load length	Ma/Mb/Mc directions: 750mm or less
Base	Material: Aluminum with white alumite treatment
Applicable controller	T1: XSEL-J/K, E-Con, P-Driver; T2: XSEL-P/Q
Cable length (Note 6)	S: 3m, M: 5m, X□□: Length specification
Cleanliness level	Conforming to Class 10 (0.1µm)
Suction duct joint	Quick duct joint with applicable outer tube diameter of ø12

Dimensions

* Note that changing the home direction will require the actuator to be returned to IAI for adjustment.

* Due to their structure, the mid-support type cannot be positioned horizontally on their side, or in vertical direction.

Brake type (optional)

* Actuators with the brake are heavier by 1.1 kg than their non-brake counterparts.

P-Driver	1 axis	Incremental	Pulse train	AC100V / AC200V	-Back cover

(Note 1) When the stroke increases, the maximum speed drops in order to prevent the ball screw from reaching a dangerous speed. (Refer to the above table for the maximum speed at each stroke.)
(Note 2) Refer to page 18 for the relationship of acceleration and load capacity.
(Notes 3, 4, 5) The figures in [] apply to the ISPDACR Series.
(Note 6) The maximum cable length is 30 m. Specify a desired length in meters. (Example: X08 = 8 m)

AQ Seal**Code AQ**

Description The AQ seal is a lubrication unit that uses lubricating material made of resin-solidified lubricating oil. The porous material impregnated with a large amount of lubricating oil slowly releases oil from its surface via capillary effect. The guide and ball screw surfaces (steel-ball rolling surface) are constantly lubricated as AQ seals are pressed against these surfaces. When used with grease, AQ seals enable maintenance-free operation for a long period.

**Brake****Code B**

Description A retention mechanism that prevents the slider from falling and damaging the load when the power or servo is turned off in a vertical actuator application.

Anti-electrostatic Specification**Code ESD**

Description This is the anti-electrostatic specification. The structural parts of the actuator are given electroless nickel-plating to add conductivity, thereby preventing the actuator from being charged with electricity. (Note: Due to plating, the maximum stroke is limited to 1000 mm on the ESD type.)

Reversed Home Specification**Code NM**

Description The standard home direction is on the motor side. To change the home direction, the encoder must be adjusted. Should you require the reverse homing specification, please specify it in your order.

Guide with Ball-retaining Mechanism**Code RT**

Description A spacer (retainer) is inserted between adjacent guide balls (steel balls) to achieve reduced noise and longer life. The spacers eliminate annoying metallic sounds generated by the balls contact with each other. These spacers also reduce the wear of balls caused by mutual friction, consequently extending the service life of the guide. The balls move smoothly without contacting each other, which improves slider mobility.

Suction Duct Joint on Opposite Side (ISDACR, ISPDACR Only)**Code VR**

Description The standard specification comes with the air suction joint on the left side as viewed from the motor. This option changes the joint location to the opposite side, or the right side.

• Even if the actual acceleration is below the rated acceleration, the load capacity will not increase beyond the level corresponding to the rated acceleration.

Controller

Program, positioner or pulse-train input type can be selected in accordance with the control method suitable for your application.

* Refer to a separate catalog for the details of each controller.

X-SEL Controller

A high-functional, multi-axis controller supporting Super SEL Language—a programming language that enables easy programming of complex operations.

- [Features]
- Simultaneous control of up to 6 axes
 - Registration of up to 128 programs/20,000 positions
 - Support of both absolute and incremental actuators
 - Compatible with DeviceNet, CC-Link, ProfiBus and Ethernet
 - CE Mark certified

SSELController

A 2-axes positioner that enables easy positioning operation. The SSEL program controller has various control functions combined into a single unit.

- [Features]
- Up to 1,500 positioning points
 - Support of both absolute and incremental actuators and Ethernet
 - With 2 axes, arc interpolation and path operation can be performed

SCON Controller

Position controller capable of 1 axis control.

- [Features]
- Supports up to 512 positioning points
 - DeviceNet, CC-Link specifications (optional)
 - Pulse converter option
