

Description

The MC1XDZPC01 mounting card is designed to host a DZCANTU series DigiFlex® Performance™ digital servo drive. The drive plugs into the bottom side of the mounting card, providing a compact assembly with connectors and switches readily accessible. The MC1XDZPC01 is ideal for prototyping and integrating a DZCANTU series digital servo drive in your machine.

The MC1XDZPC01 utilizes side-entry right angle fixed screw terminals for the motor and power connectors, and quick-disconnect signal, feedback, and communication connectors.

DZCANTU series DigiFlex® Performance™ digital servo drives communicate on a CANopen network.

Features

- ▲ Mounts DZCANTU DigiFlex® Performance™ Digital Servo Drives
- ▲ Single Axis Mounting Card
- ▲ On-board CANopen Transceiver for CANopen Communication

DRIVES SUPPORTED

- DZCANTU-020B080
- DZCANTU-040B080
- DZCANTU-020B200

FEEDBACK SUPPORTED (DRIVE FIRMWARE DEPENDENT)

- Incremental Encoder
- Auxiliary Incremental Encoder
- Hall Sensors
- 1Vp-p Sine/Cosine Encoder
- Absolute Encoder (Heidenhain EnDat® or Stegmann Hiperface®)
- ±10 VDC Position
- Tachometer (±10 VDC)

BLOCK DIAGRAM & SPECIFICATION SUMMARY

Mechanical Specifications	
Mounting Signal Connector: Mates Directly to Drive	96-port, 1.27mm spaced, dual-row socket
Mounting Power Connector: Mates Directly to Drive	50-pin, 2.0mm spaced, dual-row socket
Motor Power Connector: P1	4-port screw terminal
Power Connector: P2	4-port screw terminal
CANopen Communication Connector: P5*	8-pin, dual-row, 2.00 mm spaced plug terminal, vertical mount
USB Connector: P6	5-pin, Mini USB B Type port
I/O Connector: P7*	20-pin, dual-row, 2.00 mm spaced plug terminal, vertical mount
Auxiliary Feedback Connector: P8*	10-pin, dual-row, 2.00 mm spaced plug terminal, vertical mount
Feedback Connector: P9*	18-pin, dual-row, 2.00 mm spaced plug terminal, vertical mount
Size (L x W x H) / mm (in)	63.5 x 88.9 x 26.3 (2.5 x 3.5 x 1.0)
Weight / g (oz)	68 (2.4)

***Mating Connector Kit**

Mating connector housing and crimp pins can be ordered as a kit using *ADVANCED* Motion Controls part number **KC-MC1XDZP01**. This includes mating connector housing and crimp style contacts for the I/O, Feedback, Auxiliary Feedback, and Communication connectors. The recommended tool for crimping the contacts is Molex part number **63811-6300**.

PIN FUNCTIONS

Mounting Signal Connector

This connector mates directly to the drive. For pin functions refer to the drive datasheet.

Mounting Power Connector

This connector mates directly to the drive. For pin functions refer to the drive datasheet.

P1 – Motor Power Connector

CANopen Bit Rate Jumpers

The CANopen bit rate is controlled by jumpers JF12 and JF13, located near the USB communication connector, P6. Use the table below to configure the bit rate.

Bit Rate (kbits/sec)	JF12	JF13
Load from non-volatile memory	Not Installed	Not Installed
500	Installed	Not Installed
250	Not Installed	Installed
125	Installed	Installed

CANopen Termination Node Jumper

CANopen bus termination is controlled by jumper JF1. The last device in a CAN network requires a termination resistor across the CAN_H and CAN_L lines. JF1 is located near the CANopen communication connector, P5.

CANopen Termination	JF1
Non-terminating Node	Not Installed
Terminating Node	Installed

LED Functions

The MC1XDZPC01 contains LEDs that indicate DC Power Supply status, Logic Power Supply status, and the drive Bridge status. The Power LED (P) will light up green when power is applied to P2-Power Connector, and the Logic LED (L) will light up green when the Logic Power is applied to P3-Auxiliary Logic Connector. The Bridge Status LED (STS) indicates the servo drive's power bridge state, and will be green when the drive is enabled, and red when the drive is in a fault state.

MOUNTING CONFIGURATION

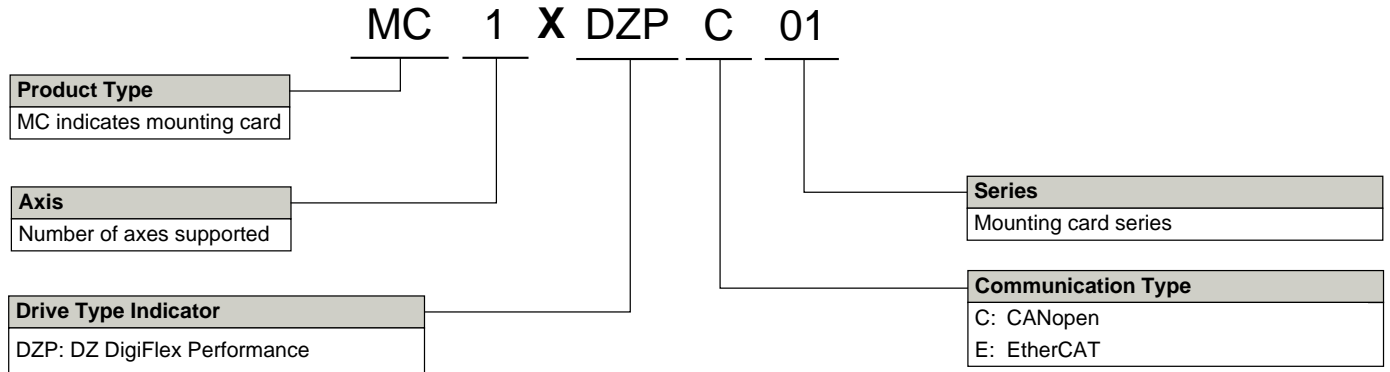

Note that a DZCANTU servo drive plugs into the MC1XDZPC01 from the underside of the mounting card to allow easy access to the mounting card switches and connectors. The drive and mounting card assembly can be secured to a panel or heatsink through the mounting holes in the drive baseplate and the sides of the mounting card.

The mounting card chassis should be secured to the drive baseplate by using the two spacers included with the MC1XDZPC01 between the MC1XDZPC01 mounting holes and the drive baseplate as shown in the below image.

PART NUMBERING INFORMATION

DigiFlex® Performance™ series of products are available in many configurations. All models listed in the selection tables of the website are readily available, standard product offerings.

ADVANCED Motion Controls also has the capability to promptly develop and deliver specified products for OEMs with volume requests. Our Applications and Engineering Departments will work closely with your design team through all stages of development in order to provide the best servo drive solution for your system. Equipped with on-site manufacturing for quick-turn customs capabilities, ADVANCED Motion Controls utilizes our years of engineering and manufacturing expertise to decrease your costs and time-to-market while increasing system quality and reliability.
