HarmonicPlanetary®

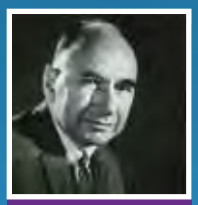
HARMONIC DRIVE®

High-Performance, Face-Mount Gearheads for Servo and Stepper Motors

HPN-L Series

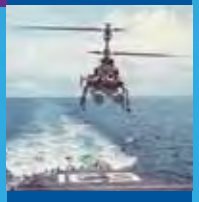
Revolutionary Technology for Evolving Industries

Harmonic Drive LLC engineers and manufactures precision servo actuators, gearheads and gear component sets. We work with industry-leading customers and companies of all sizes to provide both standard product and custom-engineered solutions to meet their mission critical application requirements. The majority of the products sold by HDLLC are proudly made at our US headquarters and manufacturing facility in Massachusetts. Affiliated companies in Japan (Harmonic Drive Systems, Inc.) and Germany (Harmonic Drive AG) provide additional manufacturing capabilities.



1955

Walt Musser's Patent Application for Strain Wave Gearing



1963

Harmonic Drive® components used in inertial damping system for an unmanned helicopter

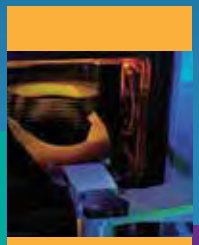
Photo credit: NASA

1971

Lunar Rover was first driven on the moon by Dave Scott. Each of the Rover's wheels were driven by a Hermetically Sealed Harmonic Drive® actuator

1977

Developed first mechatronic products (Servo Actuators) combining Harmonic Drive® gearing with servo motors and feedback sensors



1986

First use of Harmonic Drive® gear used in semiconductor wafer handling robot

1988

"S" Tooth Profile was patented providing double the torque, double the life and double the stiffness

1990

Began production of planetary gears

With over 50 years of experience, our expert engineering and production teams continually develop enabling technologies for the evolving motion control market. We are proud of our outstanding engineering capabilities and successful history of providing customer specific solutions to meet their application requirements.

Our high-precision, zero-backlash Harmonic Drive® gears and Harmonic Planetary® gears play critical roles in robotics, spaceflight applications, semiconductor manufacturing equipment, factory automation equipment, medical diagnostics and surgical robotics.

1998

Market introduction of high-precision HPG Harmonic Planetary® gearheads with low backlash for life

1999

Ultra-flat Harmonic Drive® gearing developed

2004

Mars Exploration Rover Opportunity began a 90-day mission to explore the surface of Mars. 10* years later it is still operating and making new discoveries

2004

Market introduction of the CSG high torque Harmonic Drive® gear with increased torque capacity and life

2011

Robonaut 2 launches on STS-133 and becomes the first permanent robotic crew member of the International Space Station

2015

2015 DARPA Robotics Challenge

2018

Market introduction of HPN-L Harmonic Planetary® Gearheads

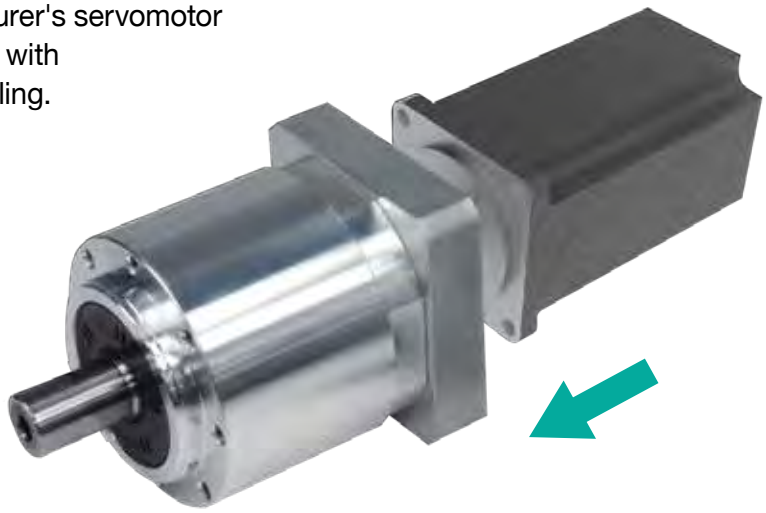
Industry Standard Face-Mount Helical Planetary Gearheads for Servo Grade Performance

High Accuracy, High Torsional Stiffness, Long Life

Precision Harmonic Planetary® gearheads offer high performance for servomotors with a wide range of available gear ratios and torque capacities.

Building a high precision actuator can be easily achieved by coupling a servomotor to one of our HPN-L Quick Connect® gearheads.

You can create a high precision actuator by connecting any manufacturer's servomotor to our precision gearhead with our Quick Connect® coupling.



HarmonicPlanetary®
HPN-L Standard Series
(Peak torque 18Nm to 300Nm)

Size	Outline Dimension (mm)	Reduction ratio *1	Backlash		Motor power
			One stage	Two stage	
14	□60	3, 4, 5, 7, 10, 15, 20, 25, 30, 35, 40, 45, 50	≤ 5 arc-min	≤ 7 arc-min	100W ~ 600W
20	□90				200W ~ 2kW
32	□115				400W ~ 7kW

*1 One stage reduction ratio - 3, 4, 5, 7, 10, two stage reduction ratio - 15, 20, 25, 30, 35, 40, 45, 50.

HarmonicPlanetary®
HPN Face-Mount Series

Size
14, 20, 32
3 Sizes

Peak Torque
18Nm ~ 300Nm

Reduction Ratio
Single stage: 3:1 to 10:1, Two stage: 15:1 to 50:1

Backlash
Single stage: < 5 arc-min, Two stage: < 7 arc-min

High Efficiency
Up to 97%

Output Bearing System
Output shaft supported by dual radial ball bearing system. The two bearings straddle the planet carrier maximizing tilting moment capacity.

Easy mounting to a wide variety of servomotors
Quick Connect® motor adaptation system includes a clamshell style servo coupling and piloted adapter flange.

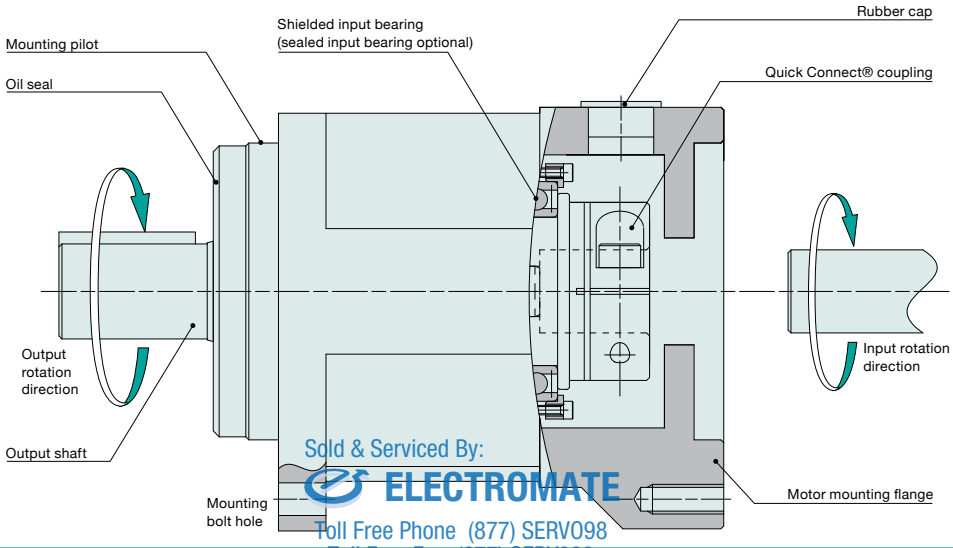
Gearhead Construction

Figure 05-1



HarmonicPlanetary® HPN Face-Mount Series

HPN Precision Planetary Gearheads are Quiet, Lightweight and Compact with Low Cost and Quick Delivery.

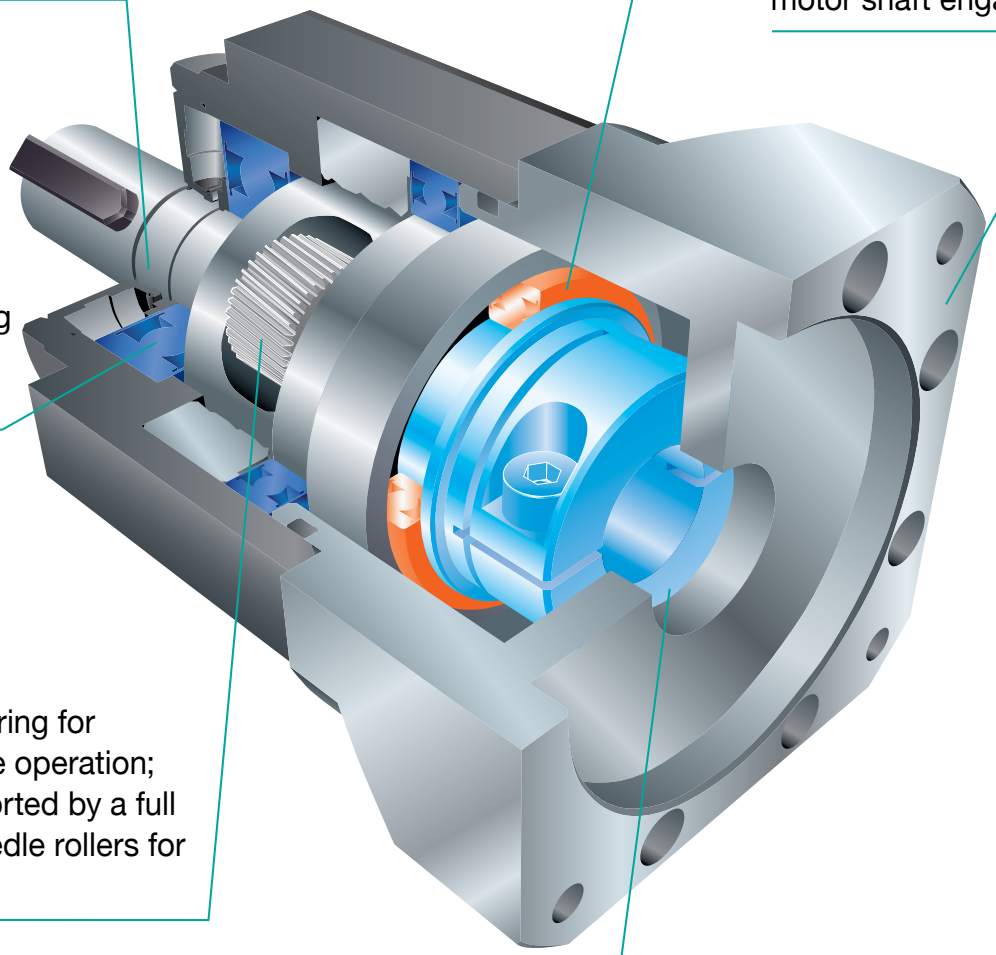
HPN Planetary gearheads feature a robust design utilizing helical gears for quiet performance and long life. These gearheads are available with short lead times and are designed to couple to any servomotor with our Quick Connect® coupling. HPN gearheads are suitable for use in a wide range of applications for precision motion control and positioning. HPN Harmonic Planetary® gears are available in 3 sizes: 14, 20, and 32 with reduction ratios ranging from 3:1 to 50:1.

- **Backlash: Single Stage <5 arc-min, Two Stage <7 arc-min**
- **Gear Ratios: Single Stage: 3:1 to 10:1, Two Stage: 15:1 to 50:1**
- **High Efficiency**
- **Helical Gearing**
- **Quiet Design: Noise <56dB**

Shielded or sealed input bearing

Input mounting flange with active centering ensures concentric motor shaft engagement

Single piece output shaft and planet carrier



Deep groove ball bearings straddle the planet carrier, providing high-shaft loading capacity

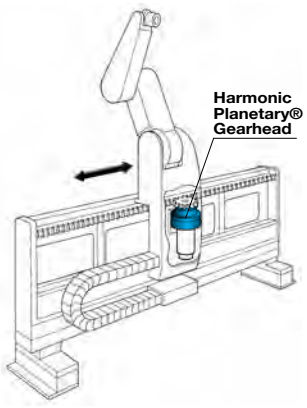
Ground helical gearing for accurate, low-noise operation; planet gears supported by a full complement of needle rollers for long life

Quick Connect® servo coupling machined and balanced to match the motor shaft diameter (single bolt clamping design)

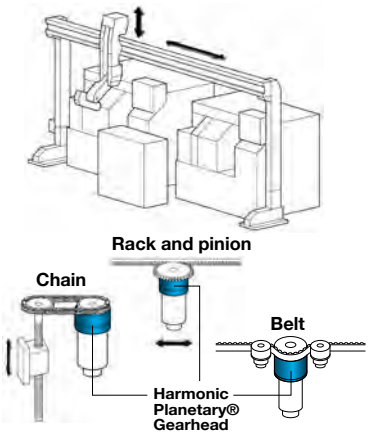
Application Examples for Harmonic Planetary® Gearheads

The Harmonic Planetary® gearheads are especially suitable for a wide range of high technology fields requiring precision motion control.

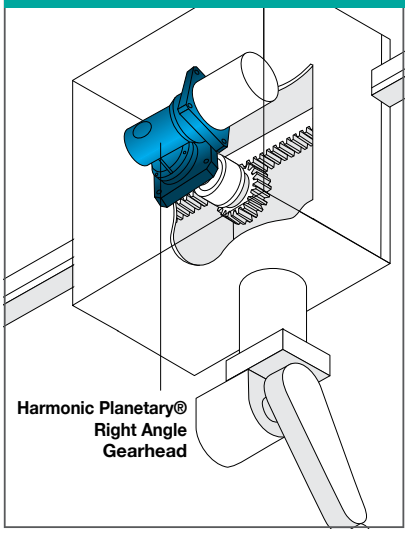
Linear axis for robots (Racks and pinion)



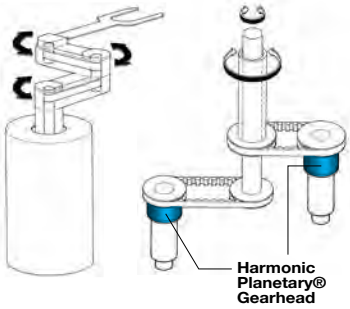
Gantry robots



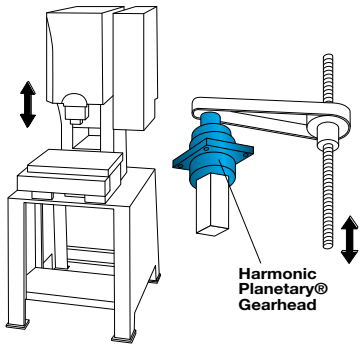
Linear axis drive



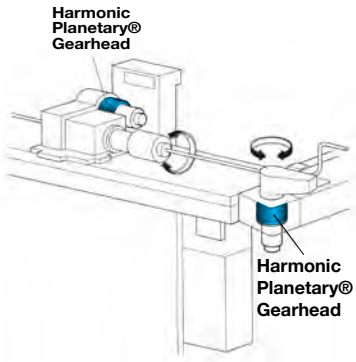
Wafer transfer robots



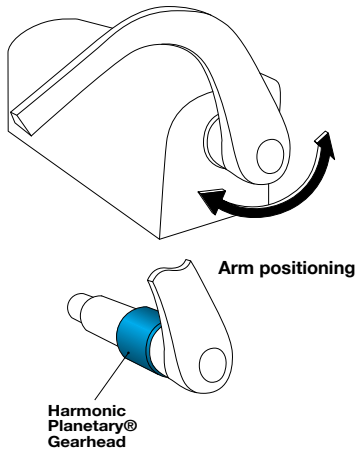
Electric presses



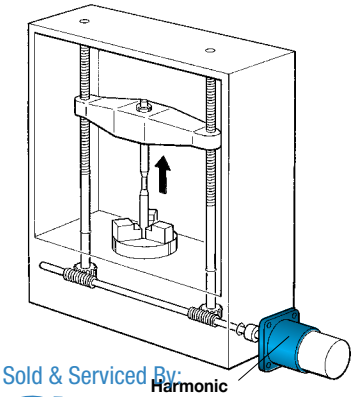
Pipe benders



Injection molding unloading robots



Tensile strength testers



X-Y axes of machine tools

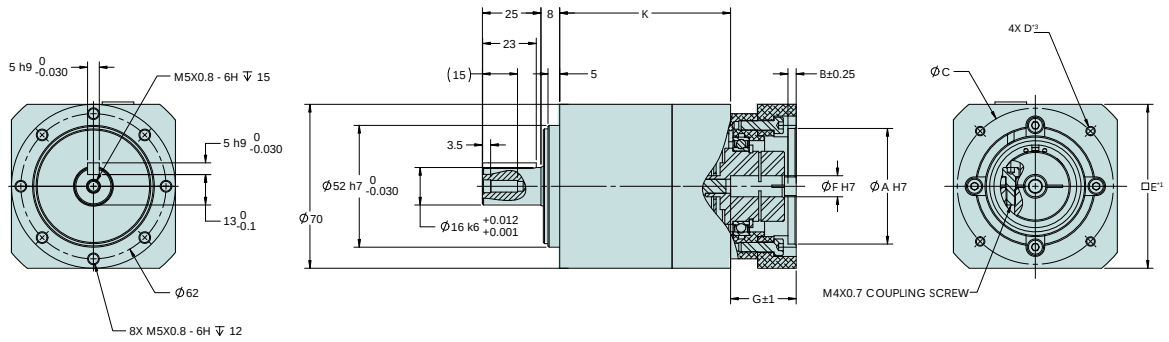
HPN-14L Outline Dimensions

Figure 011-1

(Unit: mm)



(Note) The dimension tolerances that are not specified vary depending on the manufacturing method. Please check the confirmation drawing or contact us for dimension tolerances not shown on the drawing above. Output shaft configuration shown is J6 (with a key and center tapped hole). J8 configuration has no key.

Dimension Table

(Unit: mm) Table 011-1

	Flange	Coupling	A (H7)*1		B*1	C*1		F (H7)*1		G*1		H*1	K	Mass(kg)*2
			Min.	Max.	Max.	Min.	Max.	Min.	Max.	Min.	Max.			
Single Stage	3	3	35	75	5	40	100	6	14	18	28	>109	48	0.95
Two Stage												>134	73	1.3

Refer to the confirmation drawing for detailed dimensions. Dimensions of typical products are shown. Please contact us for other mounting options if the configurations shown above are not suitable for your particular motor.
*1 May vary depending on motor interface dimensions.
*2 The mass will vary slightly depending on the ratio and on the inside diameter of the input shaft coupling.
*3 Tapped hole for motor mounting screw.

Sizing & Selection

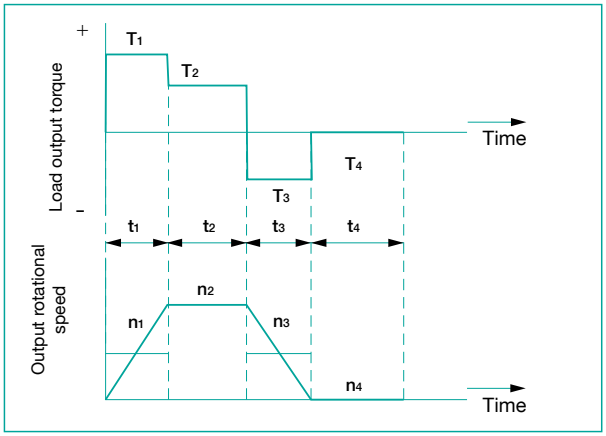
To fully utilize the excellent performance of the HPN HarmonicPlanetary® gearheads, check your operating conditions and, using the flowchart, select the appropriate size gear for your application.

Check your operating conditions against the following application motion profile and select a suitable size based on the flowchart shown on the right. Also, compare any application radial and axial loads supported by the gearhead output shaft to the allowable values in the ratings table to ensure an adequate output bearing service life.

Application motion profile

Review the application motion profile. Check the specifications shown in the figure below.

Graph 014-1



Obtain the value of each application motion profile

Load torque	T_1 to T_n (Nm)
Time	t_1 to t_n (sec)
Output rotational speed	n_1 to n_n (rpm)

Normal operation pattern

Starting (Acceleration)	T_1, t_1, n_1
Steady operation (constant velocity)	T_2, t_2, n_2
Stopping (deceleration)	T_3, t_3, n_3
Dwell	T_4, t_4, n_4

Maximum rotational speed

Max. output rotational speed	no $max \geqq n_1$ to n_n
Max. input rotational speed (Restricted by motors)	ni max $n_1 \times R$ to $n_n \times R$ R: Reduction ratio

Emergency stop torque

When impact torque is applied	T_s

Required life

L_{10} = L (hours)

Flowchart for selecting a size

Please use the flowchart shown below for selecting a size. Operating conditions must not exceed the performance ratings.

Calculate the average load torque applied on the output side from the application motion profile: T*av* (Nm).

$$Tav = \sqrt[10/3]{\frac{|n_1| \cdot t_1 \cdot |T_1|^{10/3} + |n_2| \cdot t_2 \cdot |T_2|^{10/3} + \cdots + |n_n| \cdot t_n \cdot |T_n|^{10/3}}{n_1 \cdot t_1 + n_2 \cdot t_2 + \cdots + n_n \cdot t_n}}$$

Calculate the average output speed based on the application motion profile: no av (rpm)

$$no\ av = \frac{|n_1| \cdot t_1 + |n_2| \cdot t_2 + \cdots + |n_n| \cdot t_n}{t_1 + t_2 + \cdots + t_n}$$

Make a preliminary model selection with the following condition: Tav ≦ Average load torque (Refer to rating table). — NG

OK

Determine the reduction ratio (R) based on the maximum output rotational speed (no *max*) and maximum input rotational speed (ni *max*).

$$\frac{ni\ max}{no\ max} \geqq R$$

(A limit is placed on ni *max* by motors.)
Calculate the maximum input speed (ni *max*) from the maximum output speed (no *max*) and the reduction ratio (R).

ni *max*=no *max* • R

Calculate the average input speed (ni *av*) from the average output speed (no *av*) and the reduction ratio (R): ni *av* = no *av*·R ≦ Max. average input speed (nr). — NG

OK

Check whether the maximum input speed is equal to or less than the values in the rating table.
ni *max* ≦ maximum input speed (rpm) — NG

OK

Check whether T1 and T3 are within Limit for Repeated Peak Torque (Nm) on start and stop in the rating table. — NG

OK

Check whether Ts is less than the Limit for Momentary Peak Torque (Nm) value from the ratings. — NG

OK

Calculate the life and check whether it meets the specification requirement.
Tr: Rated torque
nr: Max. average input speed

$$L_{10} = 20{,}000 \cdot \left(\frac{T_r}{Tav}\right)^{10/3} \cdot \left(\frac{n_r}{ni\ av}\right) \text{ (Hour)}$$

— NG

OK

The model number is confirmed.

Refer to the Caution note below.

Review the operation conditions, size and reduction ratio.

Caution

If any of the following conditions exist, please consider selecting the next larger speed reducer, reduce the operating loads or reduce the operating speed. If this cannot be done, please contact Harmonic Drive LLC. Exercise caution especially when the duty cycle is close to continuous operation.
i) Actual average load torque (Tav) > Rated Torque or
ii) Actual average input rotational speed (ni av) > max. average input speed (nr),
iii) Gearhead housing temperature > 70°C.

Example of size selection

Load torque	T_n (Nm)		
Time	t_n (sec)		
Output rotational speed	n_n (rpm)		

Normal operation pattern

Starting (acceleration)	T_1 = 70 Nm,	t_1 = 0.3 sec,	n_1 = 60 rpm
Steady operation (constant velocity)	T_2 = 18 Nm,	t_2 = 3 sec,	n_2 = 120 rpm
Stopping (deceleration)	T_3 = 35 Nm,	t_3 = 0.4 sec,	n_3 = 60 rpm
Dwell	T_4 = 0 Nm,	t_4 = 5 sec,	n_4 = 0 rpm

Maximum rotational speed

Max. output rotational speed	no *max* = 120 rpm
Max. input rotational speed	ni *max* = 5,000 rpm (Restricted by motors)

Emergency stop torque

When impact torque is applied: T_S = 180 Nm

Required life

L_{50} = 30,000 (hours)

Calculate the average load torque applied to the output side based on the load torque pattern: T*av* (Nm).

$$Tav = \sqrt[10/3]{\frac{|60\text{rpm}|\cdot 0.3\text{sec}\cdot|70\text{Nm}|^{10/3}+|120\text{rpm}|\cdot 3\text{sec}\cdot|18\text{Nm}|^{10/3}+|60\text{rpm}|\cdot 0.4\text{sec}\cdot|35\text{Nm}|^{10/3}}{|60\text{rpm}|\cdot 0.3\text{sec}+120\text{rpm}|\cdot 3\text{sec}+|60\text{rpm}|\cdot 0.4\text{sec}|}}$$

Calculate the average output speed based on the load torque pattern: no *av* (rpm)

$$\text{no } av = \frac{|60\text{rpm}|\cdot 0.3\text{sec}+|120\text{rpm}|\cdot 3\text{sec}+|60\text{rpm}|\cdot 0.4\text{sec}+|0\text{rpm}|\cdot 5\text{sec}}{0.3\text{sec}+3\text{sec}+0.4\text{sec}+5\text{sec}}$$

Make a preliminary model selection with the following conditions. T*av* = 30.2 Nm ≦ 80 Nm. (**HPN-20L-30** is tentatively selected based on the average load torque (see the rating table) of size 20 and reduction ratio of 30.) → NG

OK

Determine a reduction ratio (R) from the maximum output speed (no *max*) and maximum input speed (ni *max*).

$$\frac{5{,}000\text{ rpm}}{120\text{ rpm}} = 41.7 \geqq 30$$

Calculate the maximum input speed (ni *max*) from the maximum output speed (no *max*) and reduction ratio (R): ni *max* = 120 rpm・30 = 3,720 rpm

Calculate the average input speed (ni *av*) from the average output speed (no *av*) and reduction ratio (R):
ni *av* = 46.2 rpm・30= 1,386 rpm ≦ Max average input speed of size 20 3,000 rpm → NG

OK

Check whether the maximum input speed is less than the values specified in the rating table.
ni *max* = 3,720 rpm ≦ 6,000 rpm (maximum input speed of size 20) → NG

OK

Check whether T_1 and T_3 are within limit for repeated peak torque (Nm) on start and stop in the rating table.
T_1 = 70 Nm ≦ 139 Nm (Limit for repeated peak torque, size 20)
T_3 = 35 Nm ≦ 139 Nm (Limit for repeated peak torque, size 20) → NG

OK

Check whether Ts is less than limit for momentary torque (Nm) in the rating table.
T_S = 180 Nm ≦ 250 Nm (momentary max. torque of size 20) → NG

OK

Calculate life and check whether the calculated life meets the requirement.

$$L_{50} = 20{,}000 \cdot \left(\frac{80\text{Nm}}{30.2\text{ Nm}}\right)^{10/3} \cdot \left(\frac{3{,}000\text{ rpm}}{1{,}432\text{ rpm}}\right) = 25{,}809{,}937 \text{ (hours)} \geqq 30{,}000 \text{ (hours)}$$

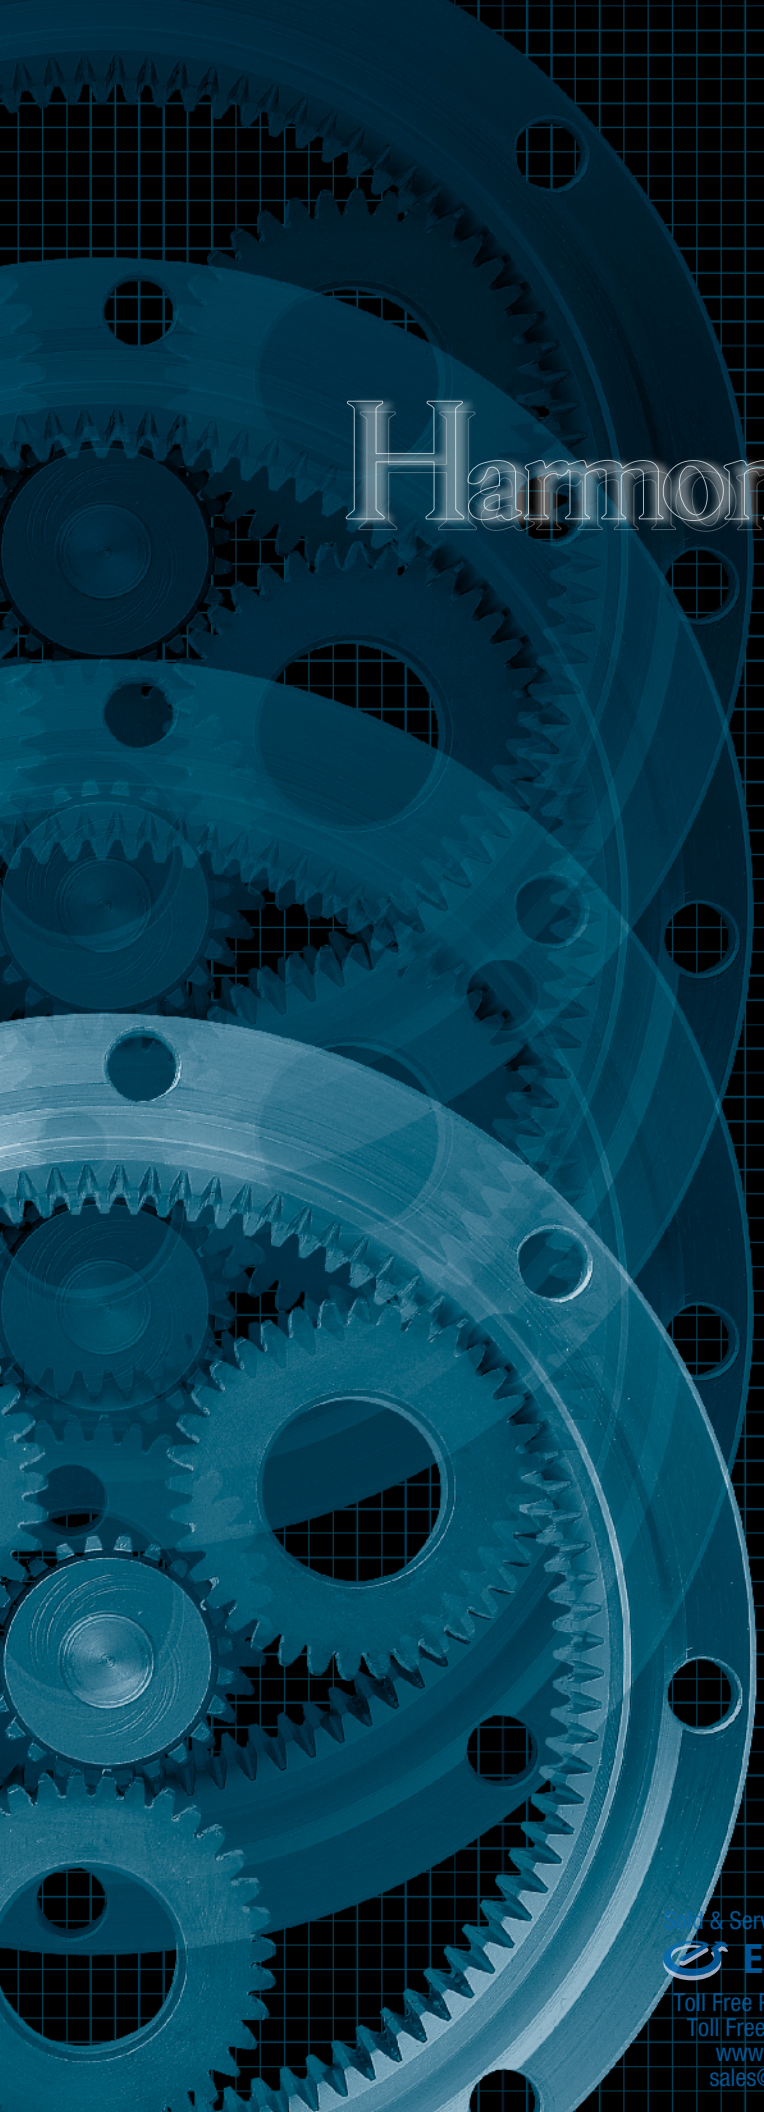
→ NG

OK

The selection of model number HPN-20L-30 is confirmed from the above calculations.

Refer to the Caution note at the bottom of page 14.

Review the operation conditions, size and reduction ratio.



HarmonicPlanetary®

Technical Information

Product Handling

Efficiency

In general, the efficiency of a speed reducer depends on the reduction ratio, input rotational speed, load torque, temperature and lubrication condition. The efficiency of each series under the following measurement conditions is plotted in the graphs on the next page. The values in the graph are average values.

Measurement condition

Table 017-1

Input rotational speed	HPN：3000rpm
Ambient temperature	25°C
Lubricant	Use standard lubricant for each model. (See page 23 for details.)

Efficiency compensated for low temperature

Calculate the efficiency at an ambient temperature of 25°C or less by multiplying the efficiency at 25°C by the low-temperature efficiency correction value. Obtain values corresponding to an ambient temperature and to an input torque (TRi*) from the following graphs when calculating the low-temperature efficiency correction value.

HPN

* TRi is an input torque corresponding to output torque at 25°C.

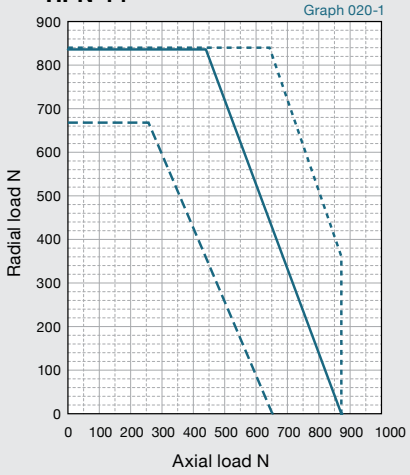
Output Shaft Bearing Load Limits

HPN Series Output Shaft Load Limits are plotted below.

HPN uses deep groove radial ball bearings to support the output shaft. Please use the curve on the graph for the appropriate load coefficient (fw) that represents the expected operating condition.

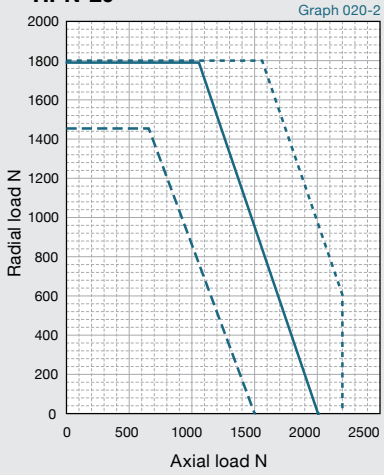
HPN-14

Graph 020-1



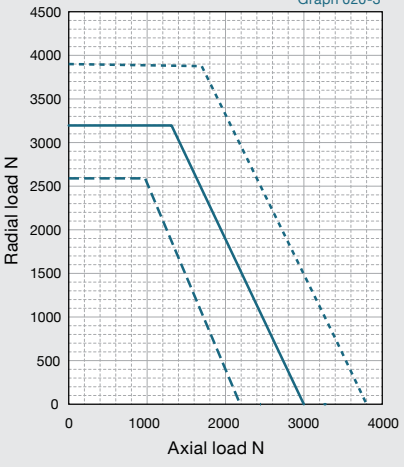
HPN-20

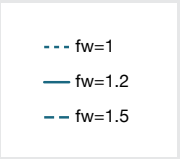
Graph 020-2



HPN-32

Graph 020-3





Load coefficient
fw=1~1.2 Smooth operation without impact
fw=1.2~1.5 Standard operation

Output shaft speed - 100 rpm, bearing life is based on 20,000 hours. The load-point is based on shaft center of radial load and axial load.

Assembly

Assemble and mount your gearhead in accordance with these instructions to achieve the best performance.
Be sure to use the recommended bolts and use a torque wrench to achieve the proper tightening torques as recommended in the tables below.

Motor assembly procedure HPN

To properly mount the motor to the gearhead, follow the procedure outlined below, refer to figure 021-1

(1) Turn the input shaft coupling and align the bolt head with the rubber cap hole.

(2) With the speed reducer in an upright position as illustrated in the figure below, slowly insert the motor shaft into the coupling of speed reducer. Slide the motor shaft without letting it drop down. If the speed reducer cannot be positioned upright, slowly insert the motor shaft into the coupling of speed reducer, then tighten the motor bolts evenly until the motor flange and gearhead flange are in full contact. Exercise care to avoid tilting the motor when inserting it into the gear head.

(3) Tighten the input shaft coupling bolt to the recommended torque specified in the table below. The bolt(s) or screw(s) is (are) already inserted into the input coupling when delivered. Check the bolt size on the confirmation drawing provided.

Bolt tightening torque

Table 021-1

Bolt size		M3	M4	M5	M6	M8	M10	M12
Tightening torque	Nm	2.0	4.5	9.0	15.3	37.2	73.5	128
	kgfm	0.20	0.46	0.92	1.56	3.8	7.5	13.1

Caution: Always tighten the bolts to the tightening torque specified in the table above. If the bolt is not tightened to the torque value recommended slippage of the motor shaft in the shaft coupling may occur. The bolt size will vary depending on the size of the gear and the shaft diameter of the mounted motor. Check the bolt size on the confirmation drawing provided.

(4) Fasten the motor to the gearhead flange with bolts.

Bolt* tightening torque

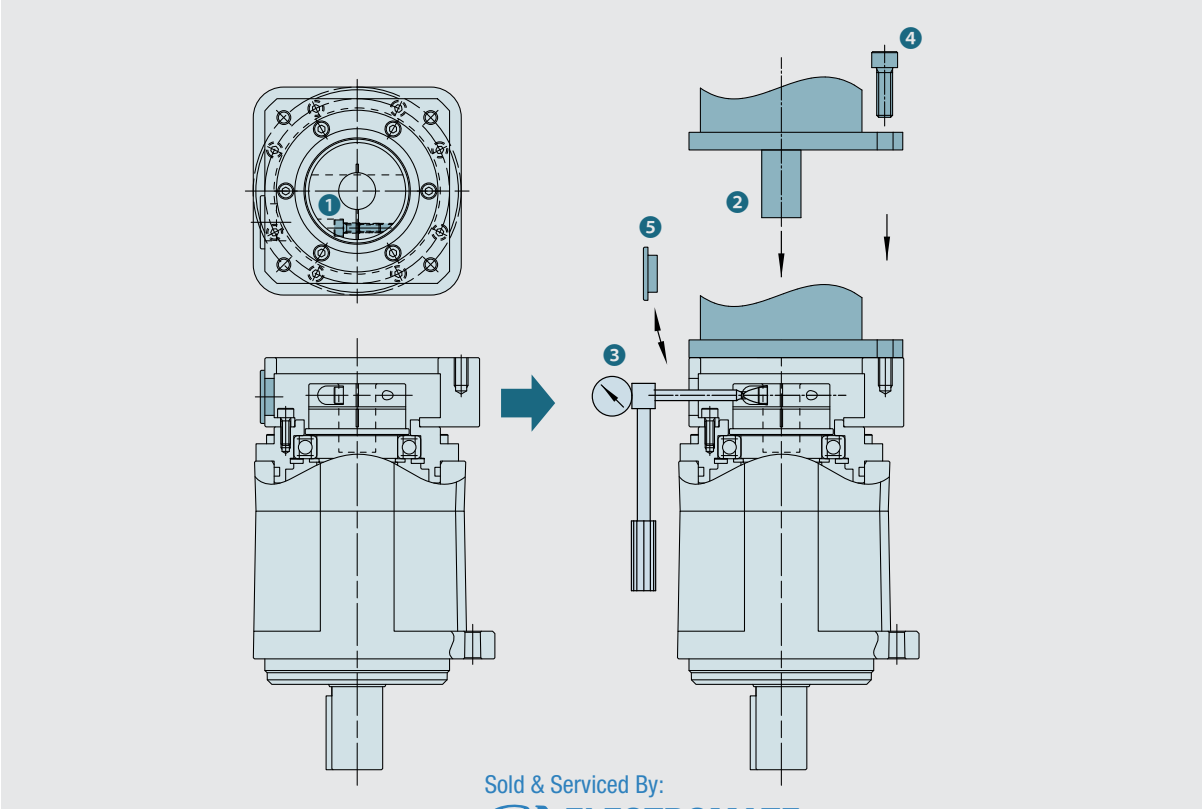
Table 021-2

Bolt size		M2.5	M3	M4	M5	M6	M8	M10	M12
Tightening torque	Nm	0.59	1.4	3.2	6.3	10.7	26.1	51.5	89.9
	kgfm	0.06	0.14	0.32	0.64	1.09	2.66	5.25	9.17

＊Recommended bolt: JIS B 1176 Hexagon socket head bolt, Strength: JIS B 1051 12.9 or higher
Caution: Be sure to tighten the bolts to the tightening torques specified in the table.

(5) Insert the rubber cap provided. This completes the assembly.

Figure 021-1



Lubrication

Prevention of grease and oil leakage

- Only use the recommended greases.
- Provisions for proper sealing to prevent grease leakage are incorporated into the gearheads. However, please note that some leakage may occur depending on the application or operating condition. Discuss other sealing options with our applications engineers.
- When mounting the gearhead horizontally, position the gearhead so that the rubber cap in the adapter flange is facing upwards.

Sealing

- Provisions for proper sealing to prevent grease leakage from the input shaft are incorporated into the gearhead.
- A double lip Teflon oil seal is used for the output shaft, gaskets or o-rings are used on all mating surfaces, and non contact shielded bearings are used for the motor shaft coupling (Double sealed bearings (D type) are available as an option*) .
- Material and surface: Gearbox: Aluminum, carbon steel (output shaft).
  Adapter flange: (if provided by Harmonic Drive) high-strength aluminum or carbon steel. Screws: black phosphate. The ambient environment should not subject any corrosive agents to the above mentioned material. The product provides protection class IP 54 under the provision that corrosion from the ambient atmosphere (condensation, liquids or gases) at the running surface of the output shaft seal is prevented. If necessary, the adapter flange can be sealed by means of a surface seal (e.g. Loctite 515).

* D type: Bearing with a rubber contact seal on both sides

Standard Lubricants

HPN Series

The standard lubrication for the HPN series gearheads is grease.
All gearheads are lubricated at the factory prior to shipment and additional application of grease during assembly is not required.
The gearheads are lubricated for the life of the gear and do not require re-lubrication.
High efficiency is achieved through the unique planetary gear design and grease selection.

Ambient operating temperature range: –10°C to +40°C

The lubricant may deteriorate if the ambient operating temperature is outside of recommended operating range. Please contact our sales office or distributor for operation outside of the ambient operating temperature range.
The temperature rise of the gear depends upon the operating cycle, ambient temperature and heat conduction and radiation based on the customers installation of the gear. A housing surface temperature of 70°C is the maximum allowable limit.

Warranty

Please contact us or visit our website at www.harmonicdrive.net for warranty details for your specific product.

All efforts have been made to ensure that the information in this catalog is complete and accurate. However, Harmonic Drive LLC is not liable for any errors, omissions or inaccuracies in the reported data. Harmonic Drive LLC reserves the right to change the product specifications, for any reason, without prior notice. For complete details please refer to our current Terms and Conditions posted on our website.

Disposal

When disposing of the product, disassemble it and sort the component parts by material type and dispose of the parts as industrial waste in accordance with the applicable laws and regulations. The component part materials can be classified into three categories.

(1) Rubber parts: Oil seals, seal packings, rubber caps, seals of shielded bearings on input side (D type only)

(2) Aluminum parts: Housings, motor flanges

(3) Steel parts: Other parts

Trademark

HarmonicDrive® is a registered trademark of Harmonic Drive LLC.
HarmonicPlanetary® is a registered trademark of Harmonic Drive LLC.

Safety

Warning : Means that improper use or handling could result in a risk of death or serious injury.

Caution : Means that improper use or handling could result in personal injury or damage to property.

Application Restrictions

This product cannot be used for the following applications:

* Space flight hardware
* Aircraft equipment
* Nuclear power equipment
* Equipment and apparatus used in residential dwellings
* Vacuum environments
* Automotive equipment
* Personal recreation equipment
* Equipment that directly works on human bodies
* Equipment for transport of humans
* Equipment for use in a special environment
* Medical equipment

Please consult Harmonic Drive LLC beforehand if intending to use one of our product for the aforementioned applications.
Fail-safe devices that prevent an accident must be designed into the equipment when the products are used in any equipment that could result in personal injury or damage to property in the event of product failure.

Design Precaution: Be certain to read the catalog when designing the equipment.

Caution

Use only in the proper environment.
- Please ensure to comply with the following environmental conditions:
  - Ambient temperature 0 to 40°C
  - No splashing of water or oil
  - Do not expose to corrosive or explosive gas
  - No dust such as metal powder

Caution

Install the equipment properly.
- Carry out the assembly and installation precisely as specified in the catalog.
- Observe our recommended fastening methods (including bolts used and tightening torques).
- Operating the equipment without precise assembly can cause problems such as vibration, reduction in life, deterioration of precision and product failure.

Caution

Install the equipment with the required precision.
- Design and assemble parts to keep all catalog recommended tolerances for installation.
- Failure to hold the recommended tolerances can cause problems such as vibration, reduction in life, deterioration of precision and product failure.

Caution

Use the specified lubricant.
- Using other than our recommended lubricant can reduce the life of the product. Replace the lubricant as recommended.
- Gearheads are factory lubricated. Do not mix installed lubricant with other kinds of grease.

Operational Precaution: Be certain to read the catalog before operating the equipment.

Caution

Use caution when handling the product and parts.
- Do not hit the gear or any part with a hammer.
- If you use the equipment in a damaged condition, the gearhead may not perform to catalog specifications. It can also cause problems including product failure.

Caution

Operate within the allowable torque range.
- Do not apply torque exceeding the momentary peak torque. Applying excess torque can cause problems such as loosened bolts, generation of backlash and product failure.
- An arm attached directly to the output shaft that strikes a solid object can damage the arm or cause the output of the gearhead to fail.

Caution

Do not alter or disassemble the product or parts.
- Harmonic Planetary® products are manufactured as matched sets. Catalog ratings may not be achieved if the component parts are interchanged.

Caution

Do not disassemble the products.
- Do not disassemble and reassemble the products. Original performance may not be achieved.

Warning

Do not use your finger to turn the gear.
- Do not insert your finger into the gear under any circumstances. The finger may get caught in the gear causing an injury.

Caution

Stop operating the system if any abnormality occurs.
- Shut down the system promptly if any abnormal sound or vibration is detected, the rotation has stopped, an abnormally high temperature is generated, an abnormal motor current value is observed or any other anomalies are detected. Continuing to operate the system may adversely affect the product or equipment.
- Please contact our sales office or distributor if any anomaly is detected.

Caution

- Rust-proofing was applied before shipping. However, please note that rusting may occur depending on the customers' storage environment.
- Although black oxide finish is applied to some of our products, it does not guarantee that rust will not form.

Handling Lubricant

Warning

Precautions on handling lubricants
- Lubricant in the eye can cause inflammation. Wear protective glasses to prevent it from getting in your eye.
- Lubricant coming in contact with the skin can cause inflammation. Wear protective gloves when you handle the lubricant to prevent it from contacting your skin.
- Do not ingest (to avoid diarrhea and vomiting).
- Use caution when opening the container. There may be sharp edges that can cut your hand. Wear protective gloves.
- Keep lubricant out of reach of children.

Caution

Disposal of waste oil and containers
- Follow all applicable laws regarding waste disposal. Contact your distributor if you are unsure how to properly dispose of the material.
- Do not apply pressure to an empty container. The container may explode.
- Do not weld, heat, drill or cut the container. This may cause residual oil to ignite or cause an explosion.

Warning

First-aid
- Inhalation: Remove exposed person to fresh air if adverse effects are observed.
- Ingestion: Seek immediate medical attention and do not induce vomiting unless directed by medical personnel.
- Eyes: Flush immediately with water for at least 15 minutes. Get immediate medical attention.
- Skin: Wash with soap and water. Get medical attention if irritation develops.

Caution

Storage
- Tightly seal the container after use. Store in a cool, dry, dark place. Keep away from open flames and high temperatures.

Disposal

Caution

Please dispose of as industrial waste.
- Please dispose of the products as industrial waste when their useful life is over.

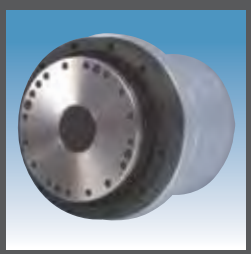
Other Products

HarmonicDrive® Gearing

HarmonicDrive® speed reducer delivers precise motion control by utilizing the strain wave gearing principle.

Rotary Actuators

High-torque actuators combine performance matched servomotors with HarmonicDrive® gears to deliver excellent dynamic control characteristics.



Linear Actuators

Compact linear actuators combine a precision lead screw and HarmonicDrive® gear. Our versatile actuators deliver both ultra precise positioning and high torque.

CSF Mini Gearheads

CSF mini gearheads provide high positioning accuracy in a super-compact package.
