## INTRODUCTION

6 AMP

3 AMP

### Kollmorgen SERVOSTAR® CD Amplifier

- 115 to 230 Volt Single Phase AC Input Power
- Resolver or Encoder Feedback
- Integrated Power Supply
- Fully Digital Control

The SERVOSTAR CD amplifier is a compact, fully digital amplifier designed to simplify installation and system set-up. Three control algorithms and self-tuning (to the load) functionality allows high performance operation to be achieved quickly and easily.

Since not one control algorithm is best for all machines, SERVOSTAR CD contains Pole Placement, PI, and PDFF control algorithms. SERVOSTAR CD utilizes the PC-based MOTIONLINK® for Windows™ which automatically takes you through the key steps of installation and start up.

### FEATURES:

#### Servo Control

- Advanced patented sinewave commutation technology provides smooth, precise low-speed control and high-speed performance
- Accurate torque control due to precision balanced current loops with closed loop sensors
- Velocity loop bandwidths to 400 Hz
- Self-tuning to the load
- S-curve acceleration feature for reducing acceleration “jerk” and machine wear
- Patented torque angle control enhances motor performance
- Fully digital control loops
- Compact and attractive rugged metal package for space-saving, modern appearance - metal package minimizes electrical noise

- Pole Placement, PI, and PDFF control options
- Low Pass or Notch Filters for compliant & resonance machines
- Command modes: Torque (analog or serial); Velocity (analog or serial); Position (analog, serial, stored or pulse)
- Two current ratings: 3 & 6 amp RMS/phase continuous
- 3 to 1 peak/continuous current rating

#### Analog Command:

- 14 Bit analog conversion
- Simple absolute & incremental thru internal profile generator

#### Easy Connectivity

- Built in encoder equivalent output can eliminate the need for an additional position feedback device
- RS232 or RS485 Communication
- Unique multi-drop configuration allows a PC or PLC to communicate to multiple SERVOSTAR CD amplifiers via single RS-232 connection
- SERVOSTAR CD’s versatile communication capabilities make it easy to integrate machine control data directly from the factory floor to your information system
- Analog  $\pm 10V$ , pulse/direction, master encoder, serial port, command options

#### Robust Design

- Protection against miswired connection on 24 Volt I/O
- ESD rugged circuit design and fully metallic enclosure
- Self-protecting intelligent power modules
- Full protection against short circuit, overvoltage, undervoltage, heatsink overtemperature, motor overtemperature, overspeed, overcurrent, and feedback loss
- UL , cUL listed, and CE
- Flash memory

#### Windows Start-up Environment – MOTIONLINK®

- Advanced motion “wizard” automatically walks you through set-up
- Auto configuration function checks for correct wiring of motor and feedback
- PC “Oscilloscope” for measuring real-time motion performance

#### Motion Indexing

- Stores up to 4 motion profiles in memory
- Start motion through serial command or digital I/O
- Homing functions

#### Configurable I/O

- 3 digital inputs, 1 digital output, & 1 analog output can be configured to a variety of functions to customize the SERVOSTAR CD to individual machines

## AUTO SET-UP

**MOTIONLINK**® for Windows takes the fear out of setting up a servo system. Designed for the novice as well as the advanced user, **MOTIONLINK** lets users quickly set-up and fine tune system performance.

**The SERVOSTAR CD Auto Set-up consists of six steps to completely configure the SERVOSTAR CD and motor for your machine:**

Set SERVOSTAR CD for the Power Source. **MOTIONLINK** will tell you if your SERVOSTAR CD was factory programmed for a line voltage. Push okay, if correct, if not, change to the appropriate voltage.

Set SERVOSTAR CD up for the Motor. If the amplifier has been programmed to operate a specific motor, **MOTIONLINK** will indicate the motor type. Push okay and go to the next step. If not, you can select from a listing of standard Kollmorgen motors or enter in the specific nameplate parameters from the motors you will be using.

Setup Feedback Device. Setup your feedback device (encoder or resolver). You can also select auto-config and have **MOTIONLINK** perform the configuration for encoder systems.

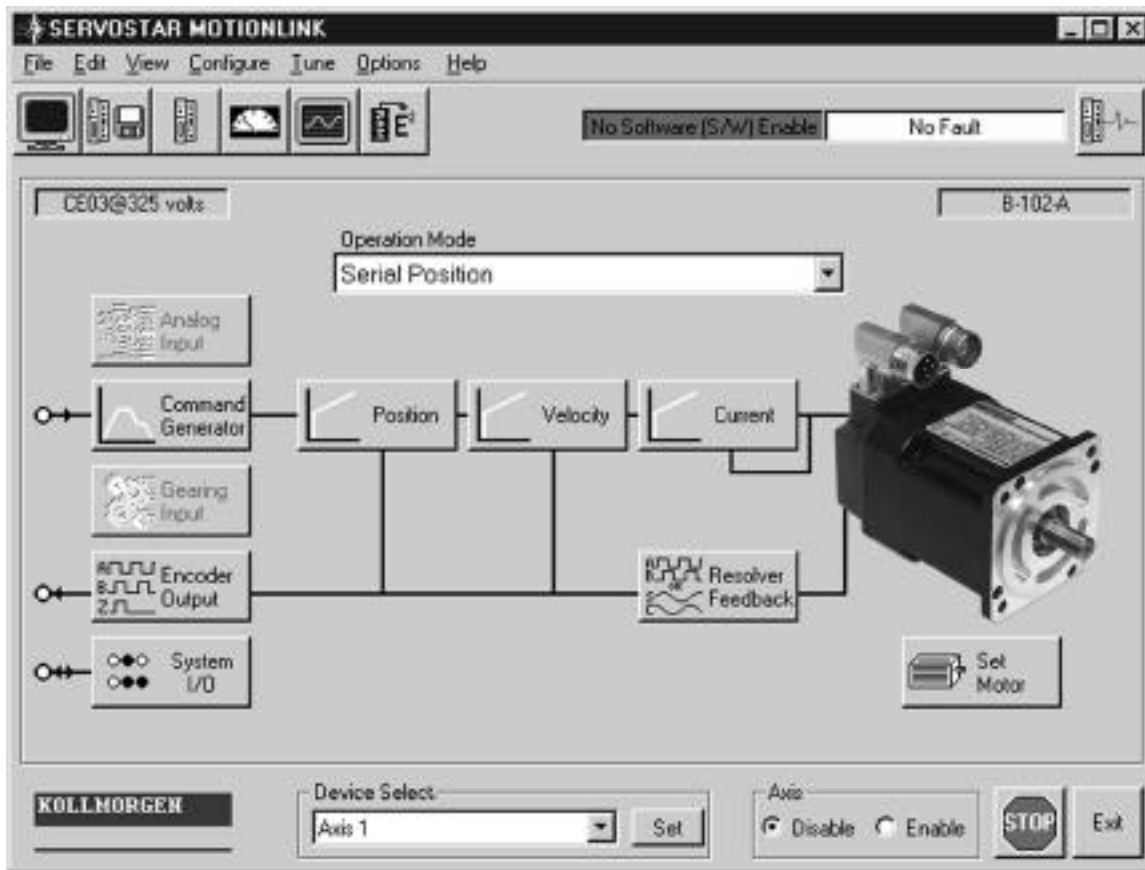

Select the Operational Mode. Set SERVOSTAR CD to run in position, electronic gearing, velocity, or current mode. Set the command to be serial, analog, or I/O.

Tune SERVOSTAR CD for the Load. Simply select the bandwidth you want the system to operate and press the Auto-tune button .

Store SERVOSTAR CD Settings : The final step is storing the parameters in SERVOSTAR CD and archiving on your hard drive or disk.

## ADDITIONAL FUNCTIONS

MOTIONLINK® also includes other features that allow you to fine tune or monitor the performance of the system.

**PC Oscilloscope:** For closely evaluating system performance **MOTIONLINK** includes the functionality of an oscilloscope. You can very easily excite the load then review performance graphically on your computer screen.

**Direct Terminal Mode:** This mode turns your computer into a “dumb terminal.” Variables or parameters can be monitored and changed using the **SERVOSTAR CD**’s command language. This mode is ideal for advanced users who want to get directly in the “heart” of the **SERVOSTAR CD**.

**Selectable Tuning Algorithms:** No one control scheme is ideal for all applications. **SERVOSTAR CD** has three control schemes to choose from: Pole Placement (Standard), PI, and PDFF. Although the Pole Placement will meet the needs of most applications, PI and PDFF control is also available. So whether your critical need is steady speed control, high accelerations or quick response to load variations, etc., **SERVOSTAR CD** provides the greatest opportunity to achieve the best machine performance.

**Monitor Mode:** Allows you to jog the motor to monitor key operation variables. Speed and torque can be viewed in real time in linear gauge format. Up to three variables can be monitored at a time.

**MOTIONLINK** includes many other features like:

- Setting resolution of encoder “equivalent” output
- Allowing position limits
- Displaying amplifier status
- Setting acceleration amps
- Limiting max speed or torque

### Feedback Devices

#### Description

- Device zeroing mode that rotates the motor to an electrical null point

#### Resolvers:

- Variety of motor/resolver pole combinations
- Resolver-zero offsetting
- Inter-LSB interpolation between least significant bits
- Automatic resolution configuration based on application speed requirements

#### Encoders:

- Maximum frequencies to 3MHz before quad
- Up to 10 million counts per motor mechanical cycle
- Configures automatically
- Index pulse offsetting capability for commutation
- Variety of encoder types
  1. encoder with or without index
  2. encoder-hall effects with or without index

### System Communications

#### Description

#### Three communication interfaces:

1. Serial port
    - RS232 single & up to 31 axis MultiDrop addressing through C1/C7 connectors
    - RS485 single & up to 31 axis MultiDrop addressing through C1 connector
    - Data transmission
      - baud rates of 9600 or 19200
    - Configurable Protocol
    - Interface through Kollmorgen's MotionLink® or a dumb terminal
  2. Differential Analog Input command through C3 connector
    - +/-10v @ 14 bit resolution
    - signal filtering
    - signal deadband and offsetting capability
- Encoder equivalent output signal with before quad resolution up to 16,384 line/revolution for a resolver-based system and up to 3MHz for an encoder-based system. This eliminates the need for an additional position feedback device.
    1. resolver-based systems: developed through R/D circuit with configurable resolution
    2. encoder-based systems: actual encoder signal from motor

## AMPLIFIER SPECIFICATIONS

### Electrical characteristics

- Closed loop velocity bandwidth up to 400 Hz
- Motor current ripple frequency (16-32 kHz)
- Long term speed regulation (0.01%)
- Position loop update rate 500  $\mu$ s (2 kHz)
- Velocity loop update rate 250  $\mu$ s (4 kHz)
- Commutation update rate 62.5  $\mu$ s (16 kHz)
- Current loop update rate 62.5  $\mu$ s (16 kHz)

### Fault protection

- Output phase to phase short circuit protection
- Overvoltage
- Undervoltage
- Overtemperature (motor and amplifier)
- Overspeed
- Overcurrent
- Feedback loss
- Foldback
- Supply loss
- Excessive position error

### Environmental

- Operation range
  - Ambient 0 to 45°C
  - Storage -20°C to 70°C
- Humidity (non-condensing) 10% to 90%

### Velocity Loop Compensation

- Vel: PI, PDFF or Pole Placement selectable algorithms
- Factory preset or field tunable
- **MOTIONLINK**® software provides tuning programming via RS-232 or RS-485 serial interface
- Adjustable filters

### Position Loop Compensation

- PID

### Operational modes

- Torque control — from analog or serial command
- Velocity control — from analog or serial command
- Pulse following / Up-Down count
- Gearing from quad encoder input
- Position control

### Inputs

- Analog command:  $\pm 10$ V  
Resolver feedback models: 14 bit resolution provides up to 16,000 to 1 dynamic speed range  
Encoder feedback models: 15 bit resolution provides up to 32,000 to 1 dynamic speed range
- Remote enable: 24V
- Three multi-purpose 24V inputs Configurable to: CW limit switch, CCW limit switch, gear enable, start motion, second current limit, change velocity to torque mode, home switch, search for home, move to home registration capture, active disable, control fault relay, hold position plus using two inputs, up to four stored indexes or speeds can be executed
- Pulse command: up/down, pulse/direction, pulse or quadrature encoder format into RS-485 receivers or opto isolators

### Communications

- RS-232 or RS-485 serial interface 9600 or 19.2 kb
- Drive-to-Drive multidrop

### Outputs

- Fault: contact closure rated for 1 Amp, 24 Volt
- One multi-purpose 24V output configurable to: speed exceeded, current exceeded, amplifier in foldback, brake enable, motion complete, in position, zero speed detect, encoder INIT complete

### Diagnostics

- Seven segment LED display
- Error history log
- Internal variable monitoring
- PC scope

### Motor Feedback

- Resolver: sine/cosine 2V peak to peak (SERVOSTAR CD provides 4.25V peak to peak for resolver excitation)
- Encoder: 5V differential quadrature with or without Halls, with or without marker, up to 3 MHz before quadrature (12 MHz after quadrature)

Cx06	6	18	2.2	34	8	115-230	2.8	ERH-26

## RESISTIVE REGENERATION SIZING/DIMENSIONS

### Resistive Regeneration Sizing

Shunt regeneration is required to dissipate energy that is pumped back into the DC bus during load deceleration. The amount of shunt regeneration required is a function of the sum of simultaneously decelerating loads. The loads need to be defined in terms of system inertia, maximum speed, and deceleration time. In addition, the duty cycle must be known. Application Note A-SU-001-H details a calculation method to determine proper regeneration sizing.

### Transformer Sizing (Required only for voltage matching)

The SERVOSTAR CD can be connected to a line. Built-in soft-start circuitry protects power supply components and eliminates nuisance tripping of breakers or fuse blowing due to large in-rush currents. Transformers are only required for voltage matching purposes. In this case, the transformer should have a 115 or 230 VAC secondary depending on the operating voltage. The kVA rating of the transformer should take into account not only the servo output load requirements but also losses in the system and power factor. For single phase operated systems such as these, the transformer KVA ratings should be two times the CD amplifier output power rating.

Model	Watts	Ohms
ERH-26	200	20

Resistive Regen ERH-26

Model	Transformer KVA rating
Cx03	2.2
Cx06	4.4

## INTRODUCTION

*Kollmorgen GOLDLINE® XT30 & XT150Series*

- **0.44 to 4.8 N-m (0.32 to 3.5 lb-ft) Continuous Torque**
- **Up to 18.7 N-m (13.8 lb-ft) Peak Torque**
- **60mm (2.35 in) and 90mm (3.5 in) Square Frames**
- **Encoder or Resolver Feedback**
- **Speeds up to 6000 RPM**

Kollmorgen **GOLDLINE XT15** and **30** series servomotors provide high performance, cost-effective solutions in compact, rugged NEMA 23 and 34 packages.

Kollmorgen's patented magnetic design allows high torque-to-inertia for rapid acceleration, while providing extremely low cogging and torque ripple for smooth operation.

The proprietary stator assembly provides more efficient heat transfer for high torque density (compact size), and at the same time increases thermal time constants to allow longer overloads on machines.

The **GOLDLINE XT** series base models designed for use with the **SERVOSTAR® CD** drive come equipped with an integral, industrial grade optical encoder (2048 Lines Per Revolution), and rugged, CE compliant, rotatable connectors. Optional resolver feedback is also available.

### FEATURES:

- Multiple stack lengths
- Short overall motor lengths
- Excellent torque-to-inertia ratio
- Low cogging/torque ripple
- Speeds to 6000 RPM standard
- Increased thermal time constant
- English and Metric standard mounting
- UL recognized, CE compliant
- Optimized windings to match **SERVOSTAR CD**
- Rotatable connectors
- Rugged 2048 LPR encoder feedback
- Built-in thermostat (XT30) or thermistor (XT15)
- IP65 sealing

### OPTIONS:

- IP67 sealing
- Integral electrically-released brake (24 or 90 VDC)
- Resolver feedback
- Mating connectors

Performance Curves notes (opposite page):

1. Continuous duty operation is with motor mounted to 8" x 12" x 3/8" aluminum faceplate.
2. All curves shown at 60Hz input. Derate max speed and peak power by 15% for 50 Hz operation.
3. For motor models with shaft seals, derate torque at all speeds by 0.926 lb-ft (0.035 N-m).
4. All curves represent typical performance. Always allow appropriate safety factor when sizing systems.

Notes:

- Continuous duty operation is based on using 8"x 12"x 3/8" aluminum plate.
- All curves shown at 60 Hz input, derate max. speed and peak power by 10% for 50 Hz operation.
- For motor models with shaft seals, derate torque at all speeds by 0.59 lb-ft (0.8 N-m) (0.98 lb-ft (1.33 N-m)) (1.17 lb-ft (1.58 N-m)) (1.36 lb-ft (1.84 N-m)) (1.55 lb-ft (2.09 N-m)) (1.74 lb-ft
